
Human Grade & Organic

Ingredients:

- Dried Egg Yolk
- Kelp (Organic)
- Gelatin
- Psyllium Husk Powder (Organic)
- Taurine
- Vitamin E (D-alpha tocopheryl succinate)
- Complex B Vitamin
- Kidney Glands (new Zealand range fed)
- Magnesium

All of our ingredients are approved by the USDA. The formulation of our ingredients is based on the recommendations of our holistic veterinarians expressly for our feline diets and you can rest assured that our Feline Instincts' diet represent the best knowledge of professionals. Our cat diets have also been approved and recommended by holistic veterinarians across the country

Whole Carcass is available in one size:

- Bag weighs 300 Grams (4.6 oz) and makes about 20 pounds of food.

We all know that our felines and Canines will benefit the most with a knowledgeable caregiver. Therefore, I am available to help with the preparation of Feline Instincts' Whole Carcass™ if you need it. Call 352-423-1054 or email us at info@felineinstincts.com

"It does take time and energy to prepare a fresh raw meat diet for your cat or dog, but that dedication is a rich reflection of the love you share."

Made in the USA

**For Cats and Dogs Raw Meat Premix
For Meat With Bones**

*Caring For The True Carnivore
Is Our Specialty©*

Alex

**Nature Created Felines and Canines
As Carnivores.
Their constitution is meant for
enzyme rich raw meat.**

Feline Nutritional Needs

Raw Meat Is Real Cat Food!

Cats (and larger exotic cats too) are designed with short and acidic digestive systems so they can process raw meat. They need the undamaged enzymes and amino acids that a raw meat diet contains; these are their protein building blocks! These enzymes are essential biological catalysts for decent nutrient absorption that allows your carnivorous pet to conserve its own enzyme energy for more important life health benefits such as longevity. Many of the important amino acids and all digestive enzymes are destroyed when raw meats are cooked. All processed pet foods are cooked!

Animals that eat processed foods often become nutritionally compromised and manifest dry and itchy skin, dull coats, weight problems, lethargy, and many illnesses. Feeding an alkaline diet of processed/cooked foods creates an imbalance in your pets' pH, and it's this imbalance which substantially contributes to urinary and kidney problems. Raw meat diets will naturally keep their systems acidic, healthy and strong, while helping to prevent illnesses.

Feeding Tips

It is my experience that most cats and dogs will want to eat more of the raw diet than the suggested serving. Here are some reasons: (1) They are more active and need the extra calories, (2) Processed pet foods of ALL kinds are filled with carbohydrate; when you remove your feline from this type of diet their bodies continue to crave it. (3) most of all their bodies are crying out for truly nutritious food.

Finicky Kitty?

Feed your cat or dog at least 8 hours between meals. Remember, unfamiliar foods don't smell the same as they have been eating. Take a small amount and put it in their mouth. This should help them accept the new food. Our liver powders are also very good for transitioning new foods.

If that fails, stir in a small amount of spring water tuna juice in their meal just to flavor it. If they eat the meal, then gradually reduce the tuna juice each day until you are serving the meals without tuna juice. Our chicken liver powder or Whole Life 100% dried chicken treats work well too. I used that for King Ramses and Lady Natascha and they were eating the raw diet in five days without any enticements.

Drinking Water & Stools

Don't be surprised if you don't notice your pet around the water dish as before the raw diet. Nature designed felines to receive sufficient amount of water from the raw diet that they are designed to eat. Cats and dogs will urinate more and have stools less often. Both are normal when on a raw diet. If kitty has a hard time passing stools, add more water to the meals or canned pumpkin

Liver Can Be Messy

I use my food processor to puree liver. The result is an easy no mess way to evenly blend the liver and distribute it throughout the recipe. Plus, cats that do not like liver will never know it's in the recipe when it is prepared this way. It's the feel of the liver they don't like in their mouth not the taste. The liver represents the "A" vitamin. Therefore, never over do liver in their diets, too much A is just as bad as not enough. No liver treats.

Use meat with bones in the recipe

Grind bones 2-3 times for domestic cats. Sometimes you can find rabbit meats already ground with the bones at a local natural food store. Or, some customers have a grinder and grind their own chicken or rabbit with the bones. In addition, there are some stores that sell human quality raw pre-made pet meats with ground bones. Some cats throw up beef meats.

Recipe Instructions

Shake the Supplement First

Mix the following ingredients in a large bowl and stir well as you add each item.

- 1/3 cup filtered water. Add more if needed
- 1/3 cup or 30 grams of "Whole Carcass" powder
- 2 Salmon Oil capsules (2000 mg) or 1 stroke of the salmon oil pump
- Add 2.pounds of raw whole ground meat with bones
- 1/2 cup of raw liver

My way of making the recipe

I begin by adding the water to a bowl, puree the liver using a food processor then the salmon oil and stir well. Add the "Whole Carcass" powder and mix well. Add your ground meats a little at a time and mix well again.

Measure daily meals in pint size Zip Lock freezer bags, or ice cub trays or freezer safe wide mouth canning jars. Like I use. If you use the zip lock bags freeze in flat Tupperware boxes, separating each layer with paper towels. Or, freeze portions in ice cube trays and then pop them in freezer bags or jars when frozen.

Keep meals frozen for up to 6 months and keep thawed for about 3 days. Warm in warm tap water only. Don't leave food out for feeding more than 1/2 hour, then put back in fridge. Feed twice a day and they will be hungry enough to finish a meal when fed.

My way of doing this recipe is not the only way. Some of my customers freeze the finished recipe in ice cube trays, others use small plastic containers. Then pop cubes in freezer bags. Do what is comfortable for you.

Daily feeding amounts

These are approximate serving sizes. Make adjustments as necessary for your cat.

Age	Servings
4-8 weeks	1-2 tablespoons 4-6 times a day
2 months	3 tablespoons 4 times a day
3 months	3-5 tablespoons 4 times a day
4-5 months	1/2 cup 3 times a day
6-12 months	1/2 cup 2 times a day
Adult 1 year	1/4-3/4 cup daily twice a day
