**Human Grade & Organic**

**Ingredients:**

- Dried Egg Yolk
- Kelp (Organic)
- Psyllium Husk Powder (Organic)
- Taurine
- Vitamin E (D-alpha tocopheryl succinate)
- Complex B Vitamin
- Adrenal Glands (new Zealand range fed)
- Enzymes & Probiotics Blends

All of our ingredients are approved by the USDA. The formulation of our ingredients is based on the recommendations of our holistic veterinarians expressly for our feline diets and you can rest assured that our **Feline Instincts** diet represent the best knowledge of professionals. Our cat diets have also been approved and recommended by holistic veterinarians across the country

**Whole Carcass** is available in one size:

- Our 120 Grams (1 cup) jar makes about two months supply of food for one cat when serving ½ cup a day.

**Customer Service and Support**

We all know that our felines will benefit the most with a knowledgeable caregiver. Therefore, I am available to help with the preparation of Feline Instincts' **Whole Carcass**™ if you need it. Call 352-503-6518 or visit us on our web site at [www.felineinstincts.com](http://www.felineinstincts.com).

enzyme rich raw meat.**

## Feline Nutritional Needs

### Raw Meat Is Real Cat Food!

Cats (and larger exotic cats too) are designed with short and acidic digestive systems so they can process raw meat. They need the undamaged enzymes and amino acids that a raw meat diet contains; these are their protein building blocks! These enzymes are essential biological catalysts for decent nutrient absorption that allows your carnivorous pet to conserve its own enzyme energy for more important life health benefits such as longevity. Many of the important amino acids and all digestive enzymes are destroyed when raw meats are cooked. All processed pet foods are cooked!

Animals that eat processed foods often become nutritionally compromised and manifest dry and itchy skin, dull coats, weight problems, lethargy, and many illnesses. Feeding an alkaline diet of processed/cooked foods creates an imbalance in your pets' pH, and it's this imbalance which substantially contributes to urinary and kidney problems. Raw meat diets will naturally keep their systems acidic, healthy and strong, while helping to prevent illnesses.

### Feeding Tips

It is my experience that most kitties will want to eat more of the raw diet than the suggested serving. There are three reasons: (1) They are more active and need the extra calories, (2) Processed pet foods of ALL kinds are filled with carbohydrate; when you remove your feline from this type of diet their bodies continue to crave it. (3) most of all their bodies are crying out for truly nutritious food.

### Finicky Kitty?

Feed your kitty at least 8 hours between meals. Remember, unfamiliar foods don't smell the same as they have been eating. Take a small amount and put it in the kitty's mouth. This should help them accept the new food. Our liver powders are also very good for transitioning new foods.

Feed your kitty at least 8 hours after their last meal. Remember, unfamiliar foods don't smell the same as they have been eating. Take a small amount and put it in the kitty's mouth. This should help them accept the new food.

If that fails, stir in a small amount of spring water tuna juice in their meal just to flavor it. If they eat the meal, then gradually reduce the tuna juice each day until you are serving the meals without tuna juice. I used this for King Ramses and Lady Natascha and they were eating the raw diet in five days without any enticements. Our chicken liver powder or Halo's 100% chicken treats work well too!

### Drinking Water & Stools

Don't be surprised if you don't notice your kitty around the water dish as before the raw diet. Nature designed felines to receive sufficient amount of water from the raw diet that they are designed to eat. Cats will urinate more and have stools less often. Both are normal when on a raw diet. If kitty has a hard time passing stools, add more water to her meals.

### Liver Can Be Messy

I use my food processor to puree liver. The result is an easy no mess way to evenly blend the liver and distribute it throughout the recipe. Plus, cats that do not like liver may never know it's in the recipe when it is prepared this way. The liver represents the "A" vitamin. Therefore, never over do liver in their diets, too much A is just as bad as not enough. No liver treats.

### Use meat with bones in the recipe

Sometimes you can find rabbit meats already ground with the bones at a local natural food store. Or, some customers have a grinder and grind their own chicken or rabbit with the bones. In addition, there are some stores that sell human quality pre-made pet meats with ground bones. Some cats throw up beef meats.

## Recipe Instructions

### Shake the Supplement First

Mix the following ingredients in a large bowl and stir well as you add each item.

- 1 & 3/4 cup filtered water
- 4 level tbsp. (30 grams) of "*Whole Carcass*" powder
- 2 Salmon Oil capsules (2000 mg) or 1 stroke of the salmon oil pump
- Add 2.2 pounds of raw whole ground chicken or rabbit with the bones
- 1/2 cup of raw liver Use chicken liver with either chicken, turkey or rabbit & beef liver for beef meats. See liver powder labels for amounts.
- Stir completely & make 1/2-3/4 cup daily portions to freeze

### My way of making the recipe

I begin by adding the water to a bowl, puree the liver using a food processor then add to the water, pierce the salmon caps and squeeze the oil into the mixture, stir, add the "*Whole Carcass*" powder and stir. Add your ground meats a little at a time and stir again.

Measure daily meals in pint size Zip Lock freezer bags. Or freezer safe wide mouth canning jars. If you use the zip lock bags freeze in flat Tupperware boxes, separating each layer with paper towels. Or, freeze portions in ice cube trays and then pop them in freezer bags or jars when frozen.

Keep meals frozen for up to 6 months and keep thawed for only 48 hours. Warm in warm tap water only. Don't leave food out for feeding more than 1/2 hour, then put back in fridge.

My way of doing this recipe is not the only way. Some of my customers freeze the finished recipe in ice cube trays, others use small plastic containers. Then pop cubes in freezer bags. Do what is comfortable for you.

### Daily feeding amounts

These are approximate serving sizes. Make adjustments as nec-

Age	Servings
4-8 weeks	1-2 tablespoons 4-6 times a day
2 months	3 tablespoons 4 times a day
3 months	3-5 tablespoons 4 times a day
4-5 months	1/2 cup 3 times a day
6-12 months	1/2 cup 2 times a day
Adult 1 year	1/4-3/4 cup daily twice a day
